

Inserters Feeders/Accessories

CIT Picture Perfect Match System running on an older inserter

tion to view every piece if desired. Images can be set to update from one to twenty cycles no matter how far apart the cameras are.

AUTOMATED MATCHING: Optical Character Recognition takes the same images captured by the basic system and converts them to data such as name or sequence number. This data can then be compared by the software and determined to be a good or bad match. In the event of a mismatch, the software can then divert the piece for inspection or stop the inserter automatically. This upgrade can also be used to verify sequence numbers and as well as end of process verification as quality control for the customer. There is no teaching of fonts. There are use two OCR engines to choose from. One is a multi-font engine and one has many common pre-taught fonts.

BARCODE RECOGNITION: Barcode recognition, can decode IMB, QR and 2D (data matrix) and some 1D barcodes to be compared to another barcode or sequence number.

STATIC MATCHING: A camera can read any generic mail piece that has an alpha/numeric text or barcode and compare it to a user defined text to verify that the correct piece is being used and is in the correct orientation.

REPORTS: All of our OCR and Barcode products provide a detailed report upon completion of the job including date, time, number of pieces, number of matches/mismatches, Sequence errors, read errors and comments of any anomalies.

READ AND PRINT: See listing in Addressing Accessories section.

COMPATIBLE EQUIPMENT: Picture Perfect can be installed on any Bell & Howell or Mailcrafters and select Flowmaster, Buhrs, stitchers, and card affixers.
