

MAIL PROCESSING OPERATIONS - APRIL 2021

As part of its 10-year plan to achieve financial sustainability and service excellence, the Postal Service is implementing key infrastructure initiatives and investments to meet the evolving mailing and shipping needs of American public and business customers.

Moving, removing, and repurposing mail processing equipment and operations or “operational mail moves” is an ongoing Postal Service strategy dating back decades that allows for more efficient, timely delivery of mail and packages. Due to the decline in mail volume, USPS will relocate or remove unnecessary letter and flat sorting equipment as appropriate to make space for much needed package processing.

Consistent with optimization and efficiency efforts paused in 2015, USPS will complete the movement of mail processing operations at 18 facilities to be completed by November 2021.
